

Automatic film application for photovoltaic panels

Discover the benefits of solar panels and EVA film for encapsulation: efficiency, durability, applications in energy and future perspectives.

Due to its flexibility and light weight, Norgard UV Pro is utilized in thin film PV applications and can be easily processed in roll-to-roll or traditional lamination. In some cases, the product can be ...

It's designed to replace glass in flexible thin film solar panels, delivering high light transmission, superb moisture barrier performance and excellent weatherability.

The SOLARTAB™ film adhesive application uses proven fluorinated polymers and patented process to ensure contact resistance as low as traditional solder-tabbing. Melt-tabbing at less than 150°C ...

This EVA/POE solar film extrusion line combines cutting-edge technology and precision control systems to deliver high-quality, reliable films used in photovoltaic module encapsulation and other industrial ...

In the photovoltaic industry, solar module manufacturers use films produced by our cast film line for encapsulating solar panels. The films provide dust-proof, waterproof, anti-aging, corrosion-resistant, ...

These high-performance films have been specially designed for this application area of solar energy and the construction of photovoltaic modules and systems. We work closely with a number of established ...

Used for gap film application in PV modules to improve photoelectric conversion efficiency and output power. After backsheet glass positioning, the system automatically applies reflective films ...

The EVA cutting machine is used for automatic cutting of EVA/POE film and placement of the 1st film on glass at the beginning of the solar modules production process.
