What is a battery module?

A battery module groups multiple cells in a defined structure. By wiring cells in series, the module's voltage rises; by wiring in parallel, capacity increases. The module bridges raw cell energy and real-world usability.

What is a battery cell module pack?

Quick takeaway: Cell -> Module -> Pack. Each step increases voltage/capacity, adds safety features (like BMS and thermal control), and improves serviceability. What Is a Battery Cell? The battery cell is the smallest functional unit--the core source of stored energy. Through electrochemistry, it converts chemical energy into electrical energy.

What is the difference between battery module and battery pack?

**Battery Module:** A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring. **Battery Pack:** A complete energy storage system containing one or more modules.

How does a battery module work?
