

Chinese researchers have been evaluating the possibility of building deep-sea integrated energy islands as part of its renewable energy strategy. The massive man-made island would be ...

Precise prediction of the power generation of photovoltaic (PV) stations on the island contributes to efficiently utilizing and developing abundant solar energy resources along the coast.

In order to help achieve China's double carbon goals, East China's Shandong Province plans to build an integrated base of wind and solar energy storage and transmission in the saline ...

While the practice of integrating fish farming with photovoltaic (PV) power generation has continued to benefit this small island situated at the easternmost tip of the Yangtze River's mouth, more green ...

A one million-kilowatt integrated solar-thermal and photovoltaic comprehensive energy demonstration project has officially connected to the grid for power generation in northwest China's Xinjiang ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field of solar panels, fixed to steel trusses in shallow water, has become the world ...

From China's southernmost island province of Hainan to the traditionally coal-producing Shanxi Province in the north, wind power industry clusters are taking form across the country.

The first batch of wind and solar projects in the clean energy base in the lower reaches of the Jinsha River have been successfully connected to the grid at full capacity, marking that China ...

Upon completion, the project is expected to generate 1.78 billion kilowatt-hours of power annually, enough to meet the needs of approximately 2.67 million urban residents in China.
