

China's solar rebounds: 22 GW in November, fastest in six months, as developers race pre-plan; BNEF trims 2025 outlook; wind adds 12.5 GW. New data suggest China's fossil-fuel generation will fall for ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

Data released on Monday by a nonprofit shows installed solar capacity is expected to overtake coal in 2026, following years of rapid expansion that have made China the world's largest ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

In a first, China has switched on a solar thermal power station in the Gobi Desert, a project described as a more cost-effective and efficient use of the technology, with the potential to be scaled ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field of solar panels, fixed to steel trusses in shallow water, has become the world ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

Artificial intelligence, new energy-storage facilities and power lines stretching across the country are helping China boost energy efficiency and take advantage of its renewable power...
