

# Estonia promotes energy storage on the power generation side

Where is Estonia's largest battery storage facility located?

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid. Estonian state-owned energy company Eesti Energia has inaugurated the nation's largest battery energy storage facility at the Auvere industrial complex in Ida-Viru County.

What does the IEA say about Estonia?

The IEA commends Estonia for the steps it has taken to end all remaining energy trade with Russia while ensuring regional energy security, and for the work to accelerate the energy transition, including setting a 2050 carbon-neutrality target and a target for 100% of annual electricity demand to be covered by renewable energy by 2030.

What are Estonia's ambitious energy goals?

Estonia's ambitious targets require accelerated renewables deployment, increased electrification and phasing out oil shale generation while ensuring a just transition that maintains energy affordability and supports economic development in the oil shale region.

Does Estonia use natural gas?

Natural gas plays a relatively minor role in Estonia's energy system and is used mostly for heating. In 2021, natural gas accounted for just 8.6% of total energy supply (versus the IEA average of 30%) and came mostly from Russia.

Construction has begun in Estonia on two energy storage facilities with a total capacity of 200 MW and 400 MWh. On Thursday, a symbolic groundbreaking ceremony took place for the ...

Summary: This article explores how the Tartu Energy Storage Power Station addresses Estonia's renewable energy challenges. Discover cutting-edge battery technologies, regional energy trends, ...

Corsica Sole and Evecon are planning the construction of two battery storage power plants with a total capacity of 400 MWh in Estonia. They are intended to help stabilize the Baltic ...

As Europe races toward 2030 renewable targets, the Tallinn Power Storage Project has become a litmus test for grid-scale battery viability in northern climates. Operational since Q4 2024, this 240 ...

The flagship battery storage project commenced operations on February 1, only days before cutting ties with the Russian power grid.

Estonia promotes energy storage on the power generation side According to the (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of ...

These targets require major investments across all sectors and improved energy sector planning. Estonia has

## Estonia promotes energy storage on the power generation side

notably decreased its greenhouse gas emissions (GHG), mainly due to an ...

As intermittent renewable capacity grows, energy storage becomes critical for balancing supply and demand. Estonia's relatively small grid makes it particularly sensitive to fluctuations in ...

The Estonian coalition agreed on the long-term energy development plan, which includes a measure to support long-duration energy storage. On 27 January, the Estonian government ...

The Estonia power plant energy storage project primarily uses lithium-ion batteries, known for their high energy density and rapid response times. However, pilot programs are also testing flow batteries and ...
