

Global leader in solar power generation

Which country has the most solar power in 2025?

China remains the global leader of this surge. In the first half of 2025, its installations more than doubled compared with the same period last year. As a result, China added more than twice as much solar capacity as the rest of the world combined, making up 67% of the global total.

Who dominated the global solar market in 2024?

In 2024, China once again dominated the global solar market, installing an impressive 329 GW, over six times the capacity added by the second-ranked United States, and exceeding the combined total of all other top 10 markets.

Are global solar installations breaking records again in 2025?

Global solar installations are breaking records again in 2025. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in 2024, when 232 GW came online. China was responsible for installing a massive 256 GW of that solar capacity.

How much solar power will the world produce in 2025?

In 2025, solar power is the cornerstone of the global energy transition, with photovoltaic (PV) systems generating over 2,000 terawatt-hours (TWh) in 2024, or 6.9% of global electricity, per Ember's Global Electricity Review 2025. Doubling from 1 TW in 2022 to 2 TW in 2024, solar capacity is skyrocketing, led by the top solar power countries.
