

How to open the energy storage box in Warframe

How much energy does a Warframe have?

Warframes have 4 abilities that at base, cost up to 100 energy to cast. Almost every Warframe has their own energy-pool with varying capacities depending on the types and costs of their various abilities, with the exceptions of Hildryn, who has no energy but uses shields, and Lavos, having no energy but instead using a cooldown system.

What happens if a Warframe has zero mod capacity?

At zero mod capacity you will start the mission with the warframes starting energy amount. Each capacity point after zero will give you an additional five energy. This energy is capped by a warframes maximum energy capacity, or the maximum amount of energy a warframe can carry. For most warframes this energy cap will be 150.

What is starting energy in Warframe?

Starting Energy refers to how much energy a Warframe starts a mission with, when reviving from Death, or going through a Sanctuary Onslaught conduit. Starting Energy can be increased with unspent mod capacity. The formula followed is: When Preparation is equipped, the formula becomes:

How do I increase the energy capacity of a Warframe?

These mods increase the energy capacity of a Warframe with the following formula: So taking Volt Prime as an example, with 200 base energy and 300 max energy he will have: The only buff currently available to increase energy capacity is Cephalon Suda's Entropy effect.
