

Leave solar power generation abandoned

A \$2 billion solar farm project to combat climate change has ended in disaster, after officials were forced to pull the plug on the experiment.

A massive solar farm of two million panels in the Mojave Desert is heading for dormancy just 11 years after going into operation. The Ivanpah installation was once the largest project of its ...

By examining abandoned RE power plants in Europe and South America, we will elaborate a typology of the reasons for abandonment, explore common patterns, and examine the regulatory ...

Once considered cutting-edge, the power generation method used by the Ivanpah facility is now considered a product of a bygone era in the ongoing evolution of solar technology.

California built a \$2.2 billion solar thermal project in the Mojave Desert in the early 2010s, with 75% of it funded by the Obama administration through loan guarantees. The project, the ...

A multibillion-dollar solar plant is set to close down next year because it's supposedly not "serving its purpose", which has left everyone saying the same thing.

As wind and solar development speeds up across the country, more states are running into questions about how to responsibly decommission or repower projects at the end of their lives.

Solar farms are built to last 30 years. Who pays to clean them up after that? At the end of its life, a solar project needs to be decommissioned. The rules around that process vary by location.

One million solar panels lie abandoned in the desert. Uncover the story behind America's lost renewable energy potential. Act now!

Researchers studying decommissioned wind and solar farms in Italy, Spain, Venezuela, and Argentina have found that weak regulations risk leaving more abandoned assets in their wake.

Leave solar power generation abandoned
