

List of organic compounds wikipedia

What are organic compounds?

Organic compounds are the hydrocarbons and their derivatives. The branch of chemistry which deals with the study of these compounds is known as organic chemistry. However, there are certain exceptions to this definition. Many carbon compounds obtained from mineral sources are not included in organic compounds. These include:

What is organic chemistry?

All these compounds are studied under a separate branch of chemistry known as organic chemistry. All organic compounds are chemical compounds primarily made of the element carbon. Most of them also contain hydrogen, and many include other elements such as oxygen, nitrogen, sulfur, phosphorus, and halogens.

Should this article or section be merged into category 'organic compounds'?

It has been suggested that this article or section be merged into category:organic compounds. (Discuss) This page aims to list well-known organic compounds, including organometallic compounds, to stimulate the creation of Wikipedia articles. Note that purely inorganic compounds, minerals, and chemical elements are not included on this list.

Which compounds can be classified as organic or inorganic?

Many compounds can be classified as organic or inorganic by the presence or absence of certain typical properties, as illustrated in Table 26 1 1. We begin our study of organic chemistry with the hydrocarbons, the simplest organic compounds, which are composed of carbon and hydrogen atoms only.

Organic compounds also contain carbon, along with other elements essential for the reproduction of living organisms. Carbon is the main factor as it has four electrons that can accommodate eight ...

Although organic compounds make up only a small percentage of Earth's crust, they are of central importance because all known life is based on organic compounds. Living things incorporate ...

What is an organic compound. What is it made up of. What are the groups of organic compounds. Check out a few examples and uses.

An organic compound is any chemical compound in which one or more atoms of carbon are covalently linked to atoms of other elements, most commonly hydrogen, oxygen, or nitrogen. The few carbon ...
