

What are aluminum electrolytic capacitors?

Aluminum electrolytic capacitors are small capacitors with high capacitance that use aluminum oxide as the dielectric. Wet type capacitors use an electrolyte as the cathode, but dry type capacitors using solids such as conductive polymers with improved performance are also available.

What is a conductive polymer hybrid aluminum electrolytic capacitor?

Conductive Polymer Hybrid Aluminum Electrolytic Capacitors (Hereinafter called capacitor) that uses highly conductive polymer electrolytic materials and electrolyte. Please read the following in order to get the most out of your capacitor.

Can conductive polymer aluminum solid capacitors use ripple current in low-frequency range?

Conductive polymer aluminum solid capacitors have super low ESR characteristic in high-frequency range. On the whole, ESR in low-frequency range relatively rises. Therefore, they can use only small ripple current in low-frequency range. Please ensure that excessive ripple current is not applied to the capacitors in all frequency range.

Uses of Aluminum Electrolytic Capacitors Principle of Aluminum Electrolytic Capacitors Other Information on Aluminum Electrolytic Capacitors Aluminum electrolytic capacitors use thin aluminum foil for the anode and cathode and aluminum oxide for the dielectric. Aluminum oxide is formed on the surface of the aluminum foil by an electrochemical oxidation process (chemical conversion). The surface of the aluminum foil is made uneven by an etching process to increase the surface area. The c...
