

What is demand response?

Demand response is a concept that has been around since the very first electric power systems. However, we have seen an explosion of research on demand response and demand side technologies in the past 30 years, coinciding with the shift towards liberalized/deregulated electricity markets and efforts to decarbonize the power sector.

Can Russia regain pre-crisis gas export levels?

We find that even under a pivot to Asia strategy, Russia struggles to regain pre-crisis gas export levels in all scenarios. Compared to 2020, Russia's gas exports are down by 13-38% in 2040, and by 31-47% where new markets to Asia are limited. A higher demand from China does not significantly improve prospects for Russia.

How did demand response in Japan perform in 2022?

In 2022, demand response in Japan saw 2.3 GW of successful bids, accounting for approximately 60% of the total bid capacity for Power Source I market, an increase of nearly 80% over 2020. In the Additional Supply Capacity market, demand response contributed 90 million kW during the winter of 2022 when Japan faced extreme power shortages.

How fast is demand response growth?

Licence: CC BY 4.0 Globally, the pace of demand response growth is far behind the 500 GW of capacity called for in 2030 in the Net Zero Scenario, under which the need for electricity system flexibility - defined as the hour-to-hour change in output required from dispatchable resources - more than doubles to 2030.

Demand response programs participation in various market segments Demand Response is a voluntary PJM program that compensates end-use (retail) customers for reducing their electricity use (load), ...

Executive summary international experience of demand response programs implementation allows to define two conceptual questions that arise while integration of the mechanism into the competitive ...

Demand Response, Prosumers and more. Read our newest blog posts about the role of electricity consumers in our energy blog

In this paper, we survey existing demand response definitions, highlight their shortcomings, propose a new definition, describe how this new definition enables us to more effectively harness the value of ...

What is demand response? Demand response refers to balancing the demand on power grids by encouraging customers to shift electricity demand to times when electricity is more plentiful or other demand ...

The war on Ukraine has reduced Russia's ability to export its ...

Third, unveiling the dynamics of renewable energy mineral production can help policymakers in Russia effectively utilize these resources to steadily meet international demand and minimize the impact of ...

Moscow demand response

The gradual shutdown of pipeline gas exports to the EU Before invading Ukraine, Russia progressively initiated a comprehensive strategy to limit gas exports. Taking advantage of being EU's #1 ...

The war on Ukraine has reduced Russia's ability to export its natural gas, notably to the European market. Under any future strategy, Russia struggles to regain pre-crisis gas export levels ...

Price based reduction in consumption Since 2016 in Russia the first stage is introduced of consumer demand response on the wholesale electric power (capacity) market

In the face of high energy prices and energy shortages, demand response (DR) programs are vital to ensure reliable operation of the energy grid. These programs assist grid operators to reduce strain on the ...
