

# No more photovoltaic panels installed in rural areas

Agriculture Secretary Brooke Rollins said Monday that the department would be cutting off subsidies for solar power projects on U.S. farmland, asserting that they are making it harder for ...

Many solar projects in the rural U.S. face fierce resistance from locals. Around the world, even politicians who support other types of renewable energy have spoken out against what they see ...

U.S. Ag Secretary Brooke Rollins has announced USDA will no longer subsidize wind and solar energy on productive farmland.

Solar energy stands out as a vital renewable energy source, especially in rural areas where energy access is often restricted. Unlike fossil fuels, solar energy harnesses sunlight, an ...

Farmland preservation groups believe 83 percent of new solar installations will come from farm and ranch lands with half of these installations on the richest land for food and crops. Solar ...

Currently, there are several ways solar panels can be installed to complement agricultural activities. Fixed vertical or tilted panels provide partial shading for crops and vegetables, protecting ...

The American Clean Power Association, an industry trade group, said in a statement that the protests present a major challenge to the solar industry and threaten its role in addressing climate...

"We are no longer allowing businesses to use your taxpayer dollars to fund solar projects on prime American farmland, and we will no longer allow solar panels manufactured by foreign ...

In July 2025, the US Department of the Interior announced the end of what it described as "preferential treatment" of subsidy-dependent wind and solar energy projects.

Solar energy is leading the way, with much of the new development occurring on farmland and in rural communities. It has the potential to be a financial opportunity for landowners, yet it can ...
