

# Photovoltaic panel cantilever length

For a cantilever bracket structure (Figure 5 a), the cantilever bracket that is the bearing part of the structure is connected to the intermediate floor using a moment connection.

I estimate I'd have at least 25% of the length of the panel unsupported. I don't think that will be an issue, but I was hoping to get some validation that this shouldn't be an issue.

Cantilever is the distance from the edge of the array to the nearest attachment point. Cantilever is a function of span, which is the distance between attachments.
