

Why do we need a co-programmed Partnership for solar PV?

For this reason, the inclusion of a co-programmed partnership for solar PV under the European Commission's Horizon Europe Strategic Plan is a significant step for the industry, which will improve the coordination of R&I efforts along the rapidly evolving solar value chain.

How will the European Commission and the solar sector work together?

The Commission and the solar sector are going to negotiate on the best possible format for the partnership, which will enter into force from early 2025. SolarPower Europe is part of the Secretariat of ETIP PV, the European solar PV sector's research representation to the European Commission.

When will the European Solar charter be implemented?

One year following the signature of the Charter, the Commission will review the implementation of the adopted commitments. The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.

What is ETIP PV?

About ETIP PV The European Technology and Innovation Platform for Photovoltaics provides advice on solar photovoltaic energy policy. It is an independent body recognised by the European Commission and the SET Plan Steering Group as a representative of the photovoltaic sector.

The European Commission has published its "Horizon Europe Strategic Plan 2025-2027," where it decided to form an official Co-Programmed European Partnership for solar with the ...

About ETIP PV The European Technology and Innovation Platform for Photovoltaics provides advice on solar photovoltaic energy policy. It is an independent body recognised by the ...

The charter sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.

In 2023, the solar photovoltaic sector in the EU and globally saw the prices of the panels plummet from ca. 0.20 EUR/W to less than 0.12 EUR/W. This unsustainable situation is weakening ...

The Implementation Working Group on PV, composed by representatives of interested SET Plan countries and relevant stakeholders, representing industry and academia, has identified the need to ...

The targets have evolved consistently since first established to help the EU reach its ambitious energy and climate goals.

The cooperation between the two companies include the full-scale synergies in clean energy technologies and commercialized applications, such as photovoltaic power ...

The plan should identify strategies for engaging in this process. For instance, for a small scale collaboration, an example strategy is the use of a pre-collaboration agreement, also sometimes called ...

The findings can support strategic decisions on R& D, prioritization of investments, identification of potential partnerships (or competitors) for technological development. Additionally, ...

The European Commission has published its "Horizon Europe Strategic Plan 2025-2027," where it decided to form an official Co-Programmed European Partnership for solar photovoltaics ...

The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.

This Commission department is responsible for the EU's energy policy: secure, sustainable, and competitively priced energy for Europe.

The renewable energy directive is the legal framework for the development of renewable energy across all sectors of the EU economy, and supports cooperation across EU countries.

Action 2: Privilege support to PV manufacturing projects in the use of ETS Member States revenues each year from 2024 to 2034. ETS revenues for the Member States amounted to ...

A range of solar technologies are available to harness the sun's energy in different ways. Solar photovoltaic (PV) panels, comprised of individual solar cells, convert sunlight into electricity. ...

Agreement will act as the permanent cooperation platform for the Parties pursuing towards the dynamic development of the PV sector in Poland, with a focus economic, environmental, technological, energy ...

In 2024, the EU output of photovoltaic electricity accounted for 11% of the EU's gross electricity output, according to Ember. Continued growth in the solar energy sector is expected in the coming decades, ...

The revised Energy Performance of Buildings Directive will speed up the uptake of solar photovoltaics and solar thermal - both on residential and non-residential buildings - and increase the possibilities ...
