Why do we need a smart grid and a microgrid?

In every country, all over the world, from refrigerators to coffee makers to heating and cooling, almost everyone in the world needs to have access to power. As the global demand rises, new methods of delivering power, such as smart grids and microgrids, have, out of necessity or choice, been developed and researched.

What is a microgrid?

The term "microgrid" refers to the concept of a small number of DERs connected to a single power subsystem. DERs include both renewable and /or conventional resources. The electric grid is no longer a one-way system from the 20th-century. A constellation of distributed energy technologies is paving the way for MGs,.

What is a smart grid?

The smart grid was developed to address the shortcomings of the conventional grid. The smart grid has the potential to reduce costs and maximize the transparency of the supply chain. Smart grids incorporate electric power conditioning and control of production which allow for energy efficiency.
