

China's cumulative installed solar capacity hit 886.66 GW at the end of 2024, with 277.17 GW of new annual installations, up 45.48% year on year. The deployment surge exceeded forecasts,...

In 2020, China saw an increase in annual solar energy installations with 48.4 GW of solar energy capacity being added, accounting for 3.5% of China's energy capacity that year. 2020 is currently the ...

In this guide, readers will explore the various aspects of solar installation, including technology, regulations, and financial incentives. We will delve into the benefits of solar energy, the ...

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

According to a Global Energy Monitor report published in July 2024, China had 180 GW of utility-scale solar farms with over 20 MW capacity under construction. This does not include small ...

China is on track to set a new record for solar power installations in 2024, driven by falling production costs and increased global interest in renewable energy, said industry experts and ...

China's solar power sector is bracing for a sharp slowdown in new installations in 2026 after a major policy overhaul last year altered how renewable energy projects are paid, threatening to ...

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in...

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already operating 1.4 TW ...
