

# Solar generator parameter settings

How do I choose a generator set?

The first step in sizing and selecting a generator set is to establish project parameters. Minimum generator set load/capacity: Running a generator set under light load can lead to engine damage, reducing reliability. Cummins Power Generation does not recommend running generator sets at less than 30 percent of rated load.

How do I sizing a generator set?

The next and most important step in sizing a generator set is to identify every type and size of load the generator set will power. In general, when non-linear loads are present, it may be necessary to oversize the alternator. Following is a general discussion of how various loads and electrical factors affect the sizing of generator sets.

How do I install a solar power system?

election and system design. Step 1: Standard Off-Grid install and commission. Install and commission the system battery. Supply loads/charge battery from PV. Ensure system is on iSolarCloud. Step 2: Connect the generator. Shut down the system and connect the generator output to the AC grid connection of the

Do you need a sizing program for a generator set?

While most sizing exercises are best done with sizing programs or with the help of a manufacturer's representative, it is still important to understand the factors that affect the operation of your generator set so you can be confident you have the right equipment for your application.
