

Solar grade glass

Whether you're drawing skyscrapers, remodeling homes or creating museum cases, our team of glass experts is ready to help you find the right glass for your project.

Pilkington Solar-E(TM) is a range of good solar control performance on-line coated glasses offering low solar heat coefficient gain, low reflectivity, reduced glare and low-emissivity.

The technology behind solar control and low emissivity is a thin transparent coating of metallic oxides, deposited on one or two glass panes of a double or triple glazing unit.

Thanks to its balanced combination of visible light transmittance (VLT), solar control and clarity, Solarban® 70 glass can help you strike the right balance between form and function.

Photovoltaic glass panels incorporate thin layers of photovoltaic cells between sheets of glass, making them capable of capturing solar radiation and transforming it into electrical power.

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and China, new facilities are popping up in North America, with ...

The photovoltaic glass grade classification standard table serves as the industry's quality compass, helping manufacturers and project developers select materials that meet specific performance ...

Customized ITO / FTO conductive glass plays a crucial role in scientific experiments, offering excellent conductivity, transparency, and stability. Ideal for photovoltaics, sensors, and analytical instruments.

Photovoltaic (PV) glass is revolutionizing the solar panel industry by offering multifunctional properties that surpass conventional glass. This innovative material not only ...

Specific values vary depending on the type of glass and its application, but generally, solar glass aims for high light transmission, low iron content for minimal color distortion, and sufficient strength to ...
