

Solar module exports slow down

The tariffs imposed by the US, which accounted for almost all of India's solar PV module exports in 2024, is impacting competitiveness of the domestic manufacturing sector with outbound...

Solar panel exports from Vietnam, Malaysia, Thailand and Cambodia to the U.S. fell by 33% on an annual basis in the nine months since the first round of tariffs in June. In the same period,...

Solar panel installations in China slowed again in August to hit the lowest in nearly three years, as producers turned to overseas markets amid sluggish domestic demand.

India's solar module and cell exports decline by 16% to \$1.5 billion in the calendar year 2024 from \$1.8 billion in 2023, as per data from Mercom.

China's solar module exports rose to 41.3 gigawatts of capacity in the first quarter, up 109 percent compared with the same period of the previous year despite the COVID-19 pandemic, according to ...

Oversupply has been central to the solar supply chain since the second quarter of 2023 but there are signs the trend is shifting. In 2024, the supply chain has experienced a slowdown. ...

India's solar module exports fell sharply in September to their lowest this year after US trade measures curbed shipments, forcing manufacturers to redirect supplies to the domestic market,...

China's solar PV module export volumes for the months of January and February 2025 were significantly weaker than last year, according to InfoLink Consulting. The country exported ...

The proportion of wind and solar traded in wholesale markets will jump from 52% in 2024 to ~100% in 2025. The resulting revenue uncertainty--which may slow PV growth after 2025--will be ...

Right now, U.S. manufacturers do not produce enough solar panels to meet the nation's demand, but industry investments and federal tax incentives have been making progress, though ...
