

# Solar panels continue to be popular

Solar energy has become increasingly popular in American households within the last decade. Solar adoption is soaring, with 4.7 million systems operating as of 2023. Thanks to federal and state ...

Solar is expected to continue growing through 2024. A 10% increase is predicted for 2024. It will cause solar output to account for more than half of U.S. capacity by the end of the year. Growth is expected ...

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That slowdown means...

The lower costs come alongside technological improvements, with solar panels becoming more powerful. Thirty-three percent of recent quotes included panels above 450 watts, up from just 1% a...

Solar energy in the United States is booming. Along with our partners at Wood Mackenzie Power & Renewables, SEIA tracks trends and trajectories in the solar industry that demonstrate the diverse and ...

Florida Power & Light's SolarTogether program is the largest community solar program in the United States with 26 current utility-owned projects on-line and 18 planned projects (1341 MWac of planned community solar).

The popularity of solar panels is being driven by a number of ever-changing factors, but some of the leading ones include technological advancements, favorable policies, and declining costs.

We expect this recent solar energy trend to continue in 2025 and beyond, resulting in solar panels with greater energy output per unit area of installation.

In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, ...

US residential and utility-scale solar energy is booming. Learn the current and future trends and how solar compares to other renewable energy sources.
